ABOUT US

Since 2004, VM Cloud Solutions C.A has executed projects for the design and installation of systems in very demanding clients and very complex industrial environments. We have acquired the necessary experience to build and offer a portfolio of products and services that meet the highest standards and system requirements in different modalities: Virtualized Platforms in the cloud (Network.Cloud.Design), IP Video systems (real-time monitoring, historical video capture and storage, search and tracking of special events) and integration with the processes of logistics and commercialization of business, VoIP systems (IP telephone exchanges) and Telecommunications Networks. In our portal you will find complete information of products and services that show the different applications and solutions that can be adjusted to your requirements. We have integrated into our portfolio of products and services the execution of projects ranging from design to installation of smart rooms, structured cabling of buildings and industrial plants, design of RED Architectures in the cloud, configuration and commissioning of virtualized platforms in Google Cloud, Amazon and Azure as well as the implementation of ERP management tools (Microsoft Dynamics, Odoo) with its different scenarios: Sales and distribution, Production, Manufacturing, Inventory management, Purchases and Accounts receivable, Finance and General Accounting.

We are a company in constant growth, inspired by teamwork and oriented to get results to guarantee the satisfaction of our customers!

VISION

“Provide our clients with corporate and personalized professional services for the development and implementation of technology projects that optimize their administrative, commercial and financial operation.”

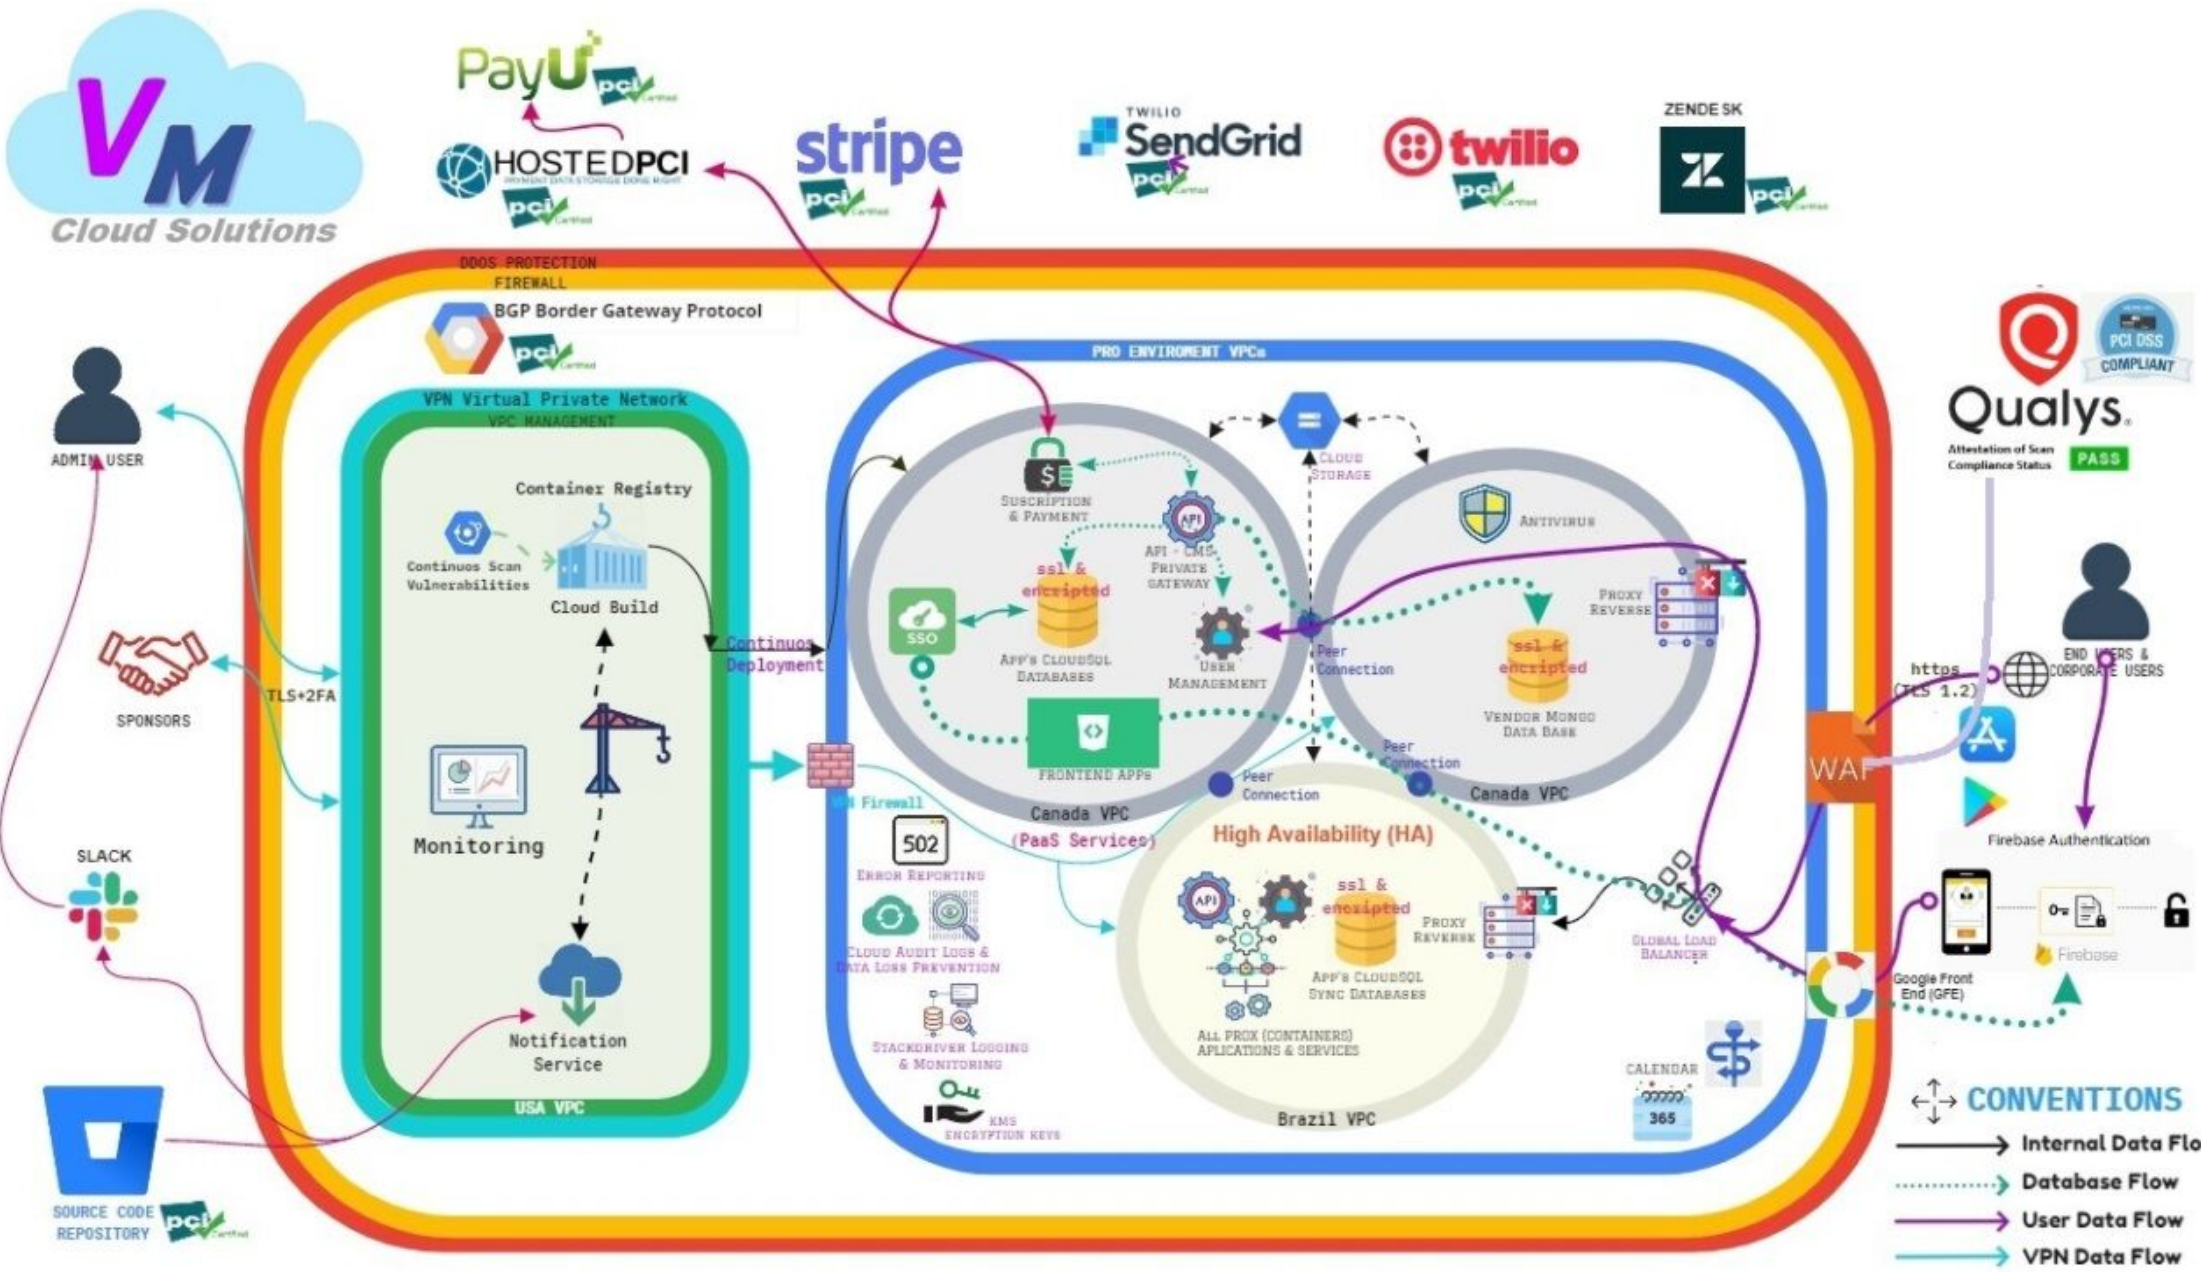

VIRTUALIZATION SERVICES

OTHER PRODUCTS AND SERVICES

MISSION

“Exceed our customers expectatives in terms of service, quality, creativity and efficiency for development and implementation of technology projects. To be recognized, in computer technology market, as a highly efficient and effective company in the advising, development and integration of computer products and services.”

© Virtualization Services - What do we do?

Cloud Network Architecture Design. Configuration and commissioning of virtualized platforms with the following functions and features:

Profitability for your Investment

NETWORK design and detailed Cost / Benefit analysis to estimate the ROI (three-year investment cash flow) of your virtualized platform.

VPN with OPENVPN

Implementation of a virtual private network (at no cost to the client (encrypted DH 2048 bits) with OpenVPN technology. Very robust firewall rules and strictly dedicated to the access and administration of the server platform.

Continuos Deployment CD/CI

Automation builds from your REPOS with delivery pipelines to get your applications/services into differents environments: development, quality assurance and production.

Isolated

Isolated Resources (VM's, balancers, VPN, Firewalls) in specific projects (development, quality control, production, monitoring and analysis) to provide greater security and stability.

Sizing

Size of Servers designed to suit the client (with sizing methodology), Intel processors and Hyper Threading Technology.

Shared networks + Firewall

Shared networks between projects (and different areas) with strict firewall rules.

Multi OS

All Operational Platforms: Linux (ubuntu, centos, suse, freeBSD) iOS, Android and Microsoft windows.

Database Administration

Database servers and replicas with Cloud SQL technology (Docker and Kubernetes).

Documentation

Detailed documentation of the entire platform with procedure guides and user manuals.

Security reports and tests

Intrusion tests and periodic analysis (daily, weekly, monthly) of vulnerabilities of its main servers. Configuration of alarms and periodic notifications (events, daily usage summaries and costs) of your virtualized platform.

VPC Private Networks

Different private networks (LANs) in each project to control and restrict traffic, access to Google Cloud services and possible malicious intrusions.

Migrations

Migration advice and execution from your current platform to the virtualized platform and Administration services for your platform.
